Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet  
-- but bad policies allow companies like AT&T and Verizon to  
shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the  
700MHz spectrum auction to create an open network that gives  
consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive  
wholesale marketplace.
3. The freedom to access any content or services we want through  
our devices.

Sincerely,

Greg Embry  
397 Skyler Street  
Grand Junction, CO 81501

3. The freedom to access any content or services we want through  
our devices.

I am a Verizon customer and have to use a locked phone where I  
have to use THEIR services if I want to get a music ringtone or  
move my pictures I have taken off my phone to my computer. You  
can't always simply switch service providers either. They charge  
outrageous fees if you leave their network early plus some  
networks don't cover an area very well. Sometimes there only one  
network that covers an area. So you are forced to use that  
providers network to get any service on your phone. It needs to  
change.

Thanks for listening Congressman Wamp

Sincerely,

Andrew Noland
